Transplant Immunology Simplified And Solid Organ Transplant Infections

FROM BENCH TO BEDSIDE

Immunology is the backbone of any transplant program. The guardians of a transplant are the technicians and immunologists who work as a team with transplant physicians and surgeons. This team works in concert to help the patient navigate through a maze of sensitization and infection for the success of the transplant. We invite you to a case-based discussion on all aspects of transplant immunology from bench to bedside for the better care of our patients.

Wise and humane management of the transplant recipient is the best safeguard against infection. The Institute of Renal Sciences would like to invite you the most exciting and thought provoking workshop so far.

The incidence of infections post transplants varies depending on the degree of immunosuppression used and other various environmental and patient related factors.

The timely diagnosis and appropriate treatment of these infections will decrease morbidity and mortality of our transplant recipients. So you are welcome to join us in the world of bugs that baffle and virulent viruses on

Transplant Immunology Simplified And Solid Organ Transplant Infections **FROM BENCH TO BEDSIDE**
